1/ Data not published for some States to avoid disclosure of individual operations.

2/ Bearing acreage estimates are primarily based on periodic orchard surveys. In non-survey years, acreage is based on trends, county extension service data, end of year production surveys and other indications.

3/ Yield is based on total production which includes unharvested production and fruit harvested but not sold due to market conditions.

SOURCE: NEW YORK AGRICULTURAL STATISTICS SERVICE

****

Cabbage: Acres intended for harvest are estimated at 12,500 acres, 11 percent less than last year but a 2 percent increase from 1993. In Florida heavy rains during September, November, and December delayed planting and fall crop harvesting in the Hastings area. Cutting began during early December in southern areas and during late December and early January in the Hastings area.

1/ NASS conducts potato objective yield surveys in 11 major fall States, accounting for about 94 percent of U.S. fall production. Producing areas of each State are represented in the sample in proportion to planted acres. The table above is derived from reported data intended to provide current information on varieties but is not designated as an official estimate. Percentages do not add to 100 because only 4 major varieties grown in each State are given.
